

Badgerland Communications Inc., an I/B licensee of several ATU frequencies, provides these comments on Docket 02-318.

We support the proposals to:

1. Delete the 3 watt total power output limit on ATU mobile frequencies.
2. Convert the power limit on ATU base frequencies to 100 watts ERP.

We do not see the need to establish a station class code for ATU licensees but we do not object to the proposal.

The power restrictions on I/B licensees that are located 50 miles or more from protected airports should be removed. Existing I/B licensees should be grandfathered and allowed to modify their licenses.
